UNIVERSITY OF MUMBAI

Revised Syllabus

For

Master of Computer Applications: MCA

Semester I and II

Under

FACULTY OF TECHNOLOGY

(As per Choice Based Credit and Grading System)

From,

Academic Year 2016-17

University of Mumbai, MCA Sem I and Sem II Rev. 2016-17

From Co-ordinator's Desk:

To meet the challenge of ensuring excellence in Master Program in Computer Applications (M.C.A.: referred as Master of Computer Applications) education, the issue of quality needs to be addressed, debated and taken forward in a systematic manner. Accreditation is the principal means of quality assurance in higher education. The major emphasis of accreditation process is to measure the outcomes of the program that is being accredited. In line with this Faculty of Technology of University of Mumbai has taken a lead in incorporating philosophy of outcome based education in the process of curriculum development.

Faculty of Technology, University of Mumbai, in one of its meeting unanimously resolved that, each Board of Studies shall prepare some Program Educational Objectives (PEO's) and give freedom to affiliated Institutes to add few (PEO's) and course objectives and course outcomes to be clearly defined for each course, so that all faculty members in affiliated institutes understand the depth and approach of course to be taught, which will enhance learner's learning process. It was also resolved that, maximum senior faculty from colleges and experts from industry to be involved while revising the curriculum. I am happy to state that, each Board of studies has adhered to the resolutions passed by Faculty of Technology, and developed curriculum accordingly. In addition to outcome based education, semester based credit and grading system is also introduced to ensure quality of Master of Computer Applications (MCA) education.

Semester based Credit and Grading system enables a much required shift in focus from teacher centric to learner centric education since the workload estimated is based on the investment of time in learning and not in teaching. It also focuses on continuous evaluation which will enhance the quality of education. University of Mumbai has taken a lead in implementing the system through its affiliated Institutes and Faculty of Technology has devised a transparent credit assignment policy and adopted ten points scale to grade learner's performance. Choice Based Credit and Grading System is implemented for First Year of Master of Computer Applications (M.C.A.) from the academic year 20162017. Subsequently this system will be carried forward for Second Year and Third Year of M.C.A. in the academic years 2017 2018 and 20182019 respectively.

Dr. S. K. Ukarande

Co-ordinator, Faculty of Technology, Member Academic Council University of Mumbai, Mumbai

Preamble:

It is a privilege to present the revised Choice Based Credit and Grading System(CBCGS) syllabus of Master of Computer Applications (M.C.A.) for Sem I and Sem II (effective from year 2016-17) with inclusion of outcome based approach and project based learning. The syllabus is designed keeping in view the requirements of Industry. The basic objective of the syllabus is to equip the students with the necessary knowledge, skills and foundation required for Application development.

Since the M.C.A. programme is inclined more towards Application Development and thus has more emphasis on latest programming languages and tools to develop better and faster applications using integrated approach. For this, the integrated lab concepts like mini-projects are introduced in Sem I and Sem II. The syllabus of Sem I and Sem II include the combination of various subject in the area of Business Management, Mathematics and Information Technology.

Dr.Dhananjay R.Kalbande

Chairman- Ad-hoc Board of Studies of Computer Application, Member- Academic Council, University of Mumbai, Mumbai.

Basic Understanding of C Programming Language Knowledge of Algorithms and Control Flow of a program

Course Educational Objectives (CEO):

CEO 1	To Explore and Study Object oriented programming and advanced C++ concepts.
CEO 2	To Improve problem solving skills by applying object oriented techniques to solve
	bigger computing problems.
CEO 3	To provide a Strong foundation for advanced programming.

Course Outcomes: At the end of the course, the students will be able to:

MCA101.1	Comprehend Object oriented programming concepts and their application
MCA101.2	To write applications using C++.
MCA101.3	Implement programming concepts to solve bigger problems.

Syllabus

Sr. No.	Module	Detailed Contents	Hours
1	Programming Basics	Introduction to Programming, Programming Paradigms, Programming Languages and Types. Introduction to C - Basic Program Structure, Execution flow of C Program, Directives, Basic Input /Output Introduction to Object Oriented Programming- OOP concepts, Advantages, Applications, Comparison of C and C++-Data Types, Control Structures, Operators and Expressions	8
2	Introduction to C++	Structure of a C++ program, Execution flow, Classes and Objects, Access modifiers, Data Members, Member Functions, Inline Functions, Passing parameters to a Function(pass by Value, Pass by Address, Pass by Reference), Function with default arguments, Function Overloading, Object as a Parameter, Returning Object Static data members and functions, Constant Data members and functions Constructors- Default, Parameterized, Copy, Constructor Overloading, Destructors Arrays, Array as a Class Member, Array of Objects, Strings- Cstyle strings and String Class	10
3	Operator Overloading and Pointers	Operator Functions-Member and Non Member Functions, Friend Functions Overloading Unary operators Overloading binary operators(Arithmetic, Relational, Arithmetic Assignment, equality), Overloading Subscript operator Type Conversion Operators- primitive to Object, Object to primitive, Object to Object Disadvantages of operator Overloading, Explicit and Mutable Pointers, Pointer and Address of Operator, Pointer to an Array and Array of Pointers, Pointer arithmetic, Pointer to a Constant and Constant Pointer, Pointer Initialization, Types of Pointers(void, null and dangling), Dynamic Memory Allocation, Advantages and Applications of pointers	10
4	Inheritance and Polymorphism	Inheritance Concept, Protected modifier, Derivation of Inheritance- Public, Private and Protected, Types of Inheritance-Simple, Multilevel, Hierarchical, Multiple, Hybrid, Constructors and Inheritance, Function Overriding and Member hiding Multiple Inheritance, Multipath inheritance – Ambiguities and solutions Polymorphism, Static and Dynamic Binding, Virtual Functions, Pure Virtual Functions, Virtual destructors, Abstract Classes, Interfaces	8

5	Streams and	Files, Text and Binary Files, Stream Classes, File IO using	8						
	Exceptions	Stream classes, File pointers, Error Streams, Random File							
		ccess, Manipulators, Overloading Insertion and extraction							
		operators							
		Error handling, Exceptions, Throwing and catching							
		exceptions, Custom Exceptions, Built in exceptions							
6	Advanced C++	Casting- Static casts, Const Casts, Dynamic Casts, and	8						
		Reinterpret Casts.							
		Creating Libraries and header files. Namespaces							
		Generic Programming, Templates, Class Templates, Function							
		Templates, Template arguments, STL							
		Database Programming with MySQL

Assessment:

Internal:

Assessment consists of two tests (T1 and T2) .The final marks should be the average of the two tests.

End Semester Theory Examination: Guidelines for setting up the question paper.

- 1. Question paper will comprise of total six questions.
- 2. Question Number One should be compulsory.
- 3. All question carry equal marks.
- 4. Students can attempt any three from the remaining.
- 5. Questions will be mixed in nature (for example supposed Q.2 has part (a) from module 3 then part (b) will be from any module other than module 3).

In question paper weightage of each module will be proportional to number of respective lecture hours as mention in the syllabus.

Knowledge of structure programming language and Application development.

Course Educational Objectives (CEO):

CEO 102.1	To understand the process of Software Engineering
CEO 102.2	To conceptualize the Software Development Life Cycle (SDLC) models.
CEO 102.3	To familiarize Project Management framework and Tools

Course Outcomes: At the end of the course, the students will be able to:

MCA102.1	Apply use of knowledge of Software Life Cycle to successfully implement the
	projects in the corporate world.
MCA102.2	Identify the Inputs, Tools and techniques to get the required Project deliverable and
	Product deliverable using 10 Knowledge areas of Project Management.
MCA102.3	Implement Project Management Processes to successfully complete project in IT
	industry.

Syllabus

Sr. No	Module	Detailed Contents	Hours
1	Introduction to software engineering and project management	Introduction to Software Engineering: Software, Evolving role of software, Three "R"-Reuse, Reengineering and Retooling, An Overview of IT Project Management: Define project, project management framework, The role of project Manager, Systems View of Project Management, Stakeholder management, Project phases and the project life cycle.	6
2	Software Process Models	Waterfall Model, Evolutionary Process Model: Prototype and Spiral Model, Incremental Process model: Iterative approach, RAD, JAD model, Concurrent Development Model, Agile Development: Extreme programming, Scrum.	6
3	Software Requirement Analysis and Specification	Types of Requirement, Feasibility Study, Requirement Analysis and Design: DFD, Data Dictionary, HIPO Chart, Warnier Orr Diagram, Requirement Elicitation: Interviews, Questionnaire, Brainstorming, Facilitated Application Specification Technique (FAST), Use Case Approach. SRS Case study, Software Estimation: Size Estimation: Function Point (Numericals). Cost Estimation: COCOMO (Numericals), COCOMO-II (Numericals). Earned Value Management.	11
4	Software Project Planning	Business Case, Project selection and Approval, Project charter, Project Scope management: Scope definition and Project Scope management, Creating the Work Breakdown Structures, Scope Verification, Scope Control.	8
5	Project Scheduling and Procurement management	Relationship between people and Effort: Staffing Level Estimation, Effect of schedule Change on Cost, Degree of Rigor & Task set selector, Project Schedule, Schedule Control, CPM (Numericals), Basic Planning Purchases and Acquisitions, Planning Contracting, Requesting Seller Responses, Selecting Sellers, Out Sourcing: The Beginning of the outsourcing phenomenon, Types of outsourcing relationship, The realities of outsourcing, Managing the outsourcing relationship.	6

6	Software Quality	Software and System Quality Management: Overview of	7 Hrs
		ISO 9001, SEI Capability Maturity Model, McCalls	
		Quality Model, Six Sigma, Formal Technical Reviews,	
		Tools and Techniques for Quality Control, Pareto	
		Analysis, Statistical Sampling, Quality Control Charts and	
		the seven Run Rule.	
		Modern Quality Management, Juran and the importance of	
		Top management, Commitment to Quality, Crosby and	
		Striving for Zero defects, Ishikawa and the Fishbone	
		Diagram.	
7	Human Resource	Human Resource Planning, Acquiring the Project Team:	4 Hrs
	Management	Resource Assignment, Loading, Leveling, Developing the	
		Project Team: Team Structures, Managing the Project	
		Team, Change management: Dealing with Conflict &	
		Resistance Leadership & Ethics.	
8	Software Risk	Risk Management: Identify IT Project Risk, Risk Analysis	4 Hrs
	Management and	and Assessment, Risk Strategies, Risk Monitoring and	
	Reliability issues	Control, Risk Response and Evaluation.	
		Software Reliability: Reliability Metrics, Reliability	
		Growth Modeling.

Basic knowledge of Computer Fundamentals

Course Educational Objectives (CEO):

CEO1	To have a understanding of Digital systems and operation of a digital computer.
CEO2	To learn different architectures & organizations of memory systems, processor
	organization and control unit.
CEO3	To understand the working principles of multiprocessor and parallel organization's
	as advanced computer architectures

Course Outcomes: At the end of the course, the students will be able to:

MCA103.1	Design trade-offs Basic fundamentals in digital logic & structure of a digital computer
MCA103.2	Identify performance issues in processor and memory design of a digital
	computer.
MCA103.3	To Develop independent learning skills and be able to learn more about different
	computer architectures and hardware.
MCA103.4	To articulate design issues in the development of Multiprocessor organization &
	architecture.

Basic Mathematics, combinatorics and calculus Knowledge.

Course Educational Objectives (CEO):

CEO 1	To equip the students with a working knowledge of probability, statistics, and
	modeling in the presence of uncertainties.
CEO 2	To understand the concept of hypothesis and significance tests
CEO 3	To help the students to develop an intuition and an interest for random phenomena and to introduce both theoretical issues and applications that may be useful in real life.

Course Outcomes: At the end of the course, the students will be able to:

MCA105.1	Distinguish between quantitative and categorical data
MCA105.2	Apply different statistical measures on data
MCA105.3	Identify, formulate and solve problems
MCA105.4	Classify different types of Probability and their fundamental applications

Basic Understanding of C Programming Language Knowledge of Algorithms and Control Flow of a program

Course Educational Objectives (CEO):

CEO 1	To Understand Concepts of Object oriented programming and basics of Software				
	Engineering				
CEO 2	To learn how C++ supports Object Oriented Principles.				
CEO 3	To Study Design of reliable and maintainable Object Oriented Applications using				
	an Integrated Software Engineering Approach.				

Course Outcomes: Students will be able to:

MCA L101.1	Design and Develop the solution to a problem using Object Oriented			
	Programming Concepts			
MCA L101.2	Demonstrate use of C++ Concepts			
MCA L101.3	Develop real time applications.			

Sr.	Module	Detailed Contents	Hours

Understanding of Algorithms

Course Educational Objectives (CEO):

CEO 1	To teach efficient storage mechanisms of data for an easy access.
CEO 2	To design and implement various basic and advanced data structures.
CEO 3	To introduce various techniques for representation of the data in the real world.

Course Outcomes: At the end of the course, the students will be able to :

MCA201.1	Analyze and compute efficiency of various algorithms.
MCA201.2	Effectively choose the data structure that efficiently model the information in a
	problem
MCA201.3	Describe how Linear data structures are represented in memory and used by
	algorithms and their applications
MCA201.4	Identify the benefits of Non-linear Data Structures and their applications

Syllabus

Sr	Module	Detailed Contents	Hours
1	Introduction to Data Structures & Algorithms	Introduction of Data structures, Abstract Data Types, Performance Analysis: Space Complexity, Time Complexity, Asymptotic Notations (Big O, Omega, Theta), Performance measurement, Divide and Conquer, Back Tracking Method, Dynamic programming	4
2	Sortingandsearchingalgorithms	Bubble sort, Insertion sort, Radix Sort, Quick sort, Merge sort, Heap sort, Selection sort, shell Sort, Linear Search, Sequential search, Binary search	6
3	Hashing	Different Hashing Techniques, Address calculation Techniques, Common hashing functions, Collision resolution techniques: Linear probe, Quadratic probe, Key offset. Rehashing, Double hashing, Link list addressing.	8
4	Linear Data Structures	Stack Definition, Operations, Implementation of Stacks (Array and Linked list) and applications-Evaluation of postfix expression, Balancing of parenthesis Queue: Definition, Operations, Implementation of simple queue (Array and Linked list) and applications of queue-BFS Types of queues: Circular, Double ended, Priority, Implementation using linked list Types of Linked List: Singly, Doubly and Circular Linked list Definition, Operations (Insert, delete, traverse, count, search) Applications of Linked List: Polynomial Addition and Subtraction	14
5	Non-linear Data Structures	Tree Definition and concepts, General Tree- Definition, Insertion and Deletion into general tree, Binary Tree- Definition, Insertion and Deletion into binary tree, Traversal of a binary tree, Reconstruction of a binary tree from traversal, Conversion of general tree into binary tree, Huffman tree, Expression tree, Binary threaded three Binary Search Tree- Definition, Operation, Implementation AVL tree- Definition, AVL tree rotation with examples, Heaps-Definition, Operations (insertion, delete, build) M way Tree- Introduction, B tree-definition and examples and B [*]	14
6	Graphs	Definition, Types, Operations, Representation, Networks, Traversals of graph, Minimum spanning tree, Kruskal's Algorithm, Prim's Algorithm, Warshall's Algorithm,Shortest path algorithm-dijsktra's algorithm	6

Reference Books

- 3. Shaum's Outlines Data Structure Seymour Lipschutz TMH
- 4. Michael T.Goodrich "Data Structures and Algorithms in C++-" Wiley Publications

Theory paper will be of **80** marks. **Internal** assessment will be of **20** marks, which will be the average of two tests (T1 and T2) of 20 marks each.

Assessment:

Internal:

Assessment consists of two tests (T1 and T2) .The final marks should be the average of the two tests.

End Semester Theory Examination: Guidelines for setting up the question paper.

- 1. Question paper will comprise of total six questions.
- 2. Question Number One should be compulsory.
- 3. All question carry equal marks.
- 4. Students can attempt any three from the remaining.
- 5. Questions will be mixed in nature (for example supposed Q.2 has part (a) from module 3 then part (b) will be from any module other than module 3).

In question paper weightage of each module will be proportional to number of respective lecture hours as mention in the syllabus.

			20	20	20		80		-	-	-	100	

Pre-requisites: Computer Organization and Architecture

Course Educational Objectives (CEO):

CEO 1	To teach Operating system design
CEO 2	To understand the process concurrency and synchronization, deadlocks and various
	memory management policies.
CEO 3	To teach the concepts of input/output, storage and file management
CEO 4	To teach various protection and security mechanisms and to study and compare
	different operating systems & their features.

Course Outcomes: At the end of the course, the students will be able to :

MCA202.1	Classify different styles of operating system designs
MCA202.2	Analyze process management, I/O management, memory management functions of
	Operating System
MCA202.3	Employ process scheduling and disk scheduling algorithms.
MCA202.4	Explore file management and protection and security concepts.

Syllabus:

Sr No	Module	Detailed Contents	Hours
1	Introduction to System Software & operating System	Introduction to System Software & operating System Overview of all system softwares: Compiler, Assembler, Linker, Loader, Operating system, OS services and Components, Types of OS-Batch, multiprocessing, multitasking, timesharing, Distributed OS, Real time OS, virtual machines, System Calls, types of System calls, Buffering, Spooling	5
2	Process and Thread Management	Process and Thread Management: - Concept of process and threads, Process states, Process management, Context switching, Interaction between processes and OS, Multithreading, CPU scheduling algorithms, multiprocessor scheduling algorithms, Real time scheduling algorithms	10
3	Concurrency Control	Concurrency Control: Concurrency and Race Conditions, Mutual exclusion requirements, Software and hardware solutions, Semaphores, Monitors, Classical IPC problems and solutions, Deadlock, Characterization, Detection, Recovery, Avoidance and Prevention	8
4	Memory Management	Memory Management: Memory partitioning, Swapping, Paging, Segmentation, Virtual memory, Overlays,Demand paging, Performance of Demand paging, Virtual memory concepts, Page replacement algorithms, Allocation algorithms	9
5	Mass Storage Structure	Mass Storage Structure: Secondary-Storage Structure, Disk structure, Disk scheduling, Disk management, Swap-space management, Disk reliability, Stable storage implementation, Introduction to clock, Clock hardware, Clock software	7
6	File systems	File systems: File concept, File support, Access methods, Allocation methods, Directory systems, File protection, Free space management	4
7	Protection & Security	Protection & Security: Protection- Goals of protection, Domain of protection, Access matrix, Implementation of access matrix, Revocation of access rights Security- The security problem, Authentication, One-Time passwords, Threats	4
8	Case Study	Case Study : Study of different Operating, Systems(Linux, Windows, Android OS, iOS)	5

Digital Computer Fundamentals, Computer Architecture.

Course Educational Objectives (CEO):

CEO 1	To help learners get a grounding of basic network components and architecture.
CEO 2	To explore basic networking models.
CEO 3	To learn the way protocols are used in networks and their design issues.

Course Outcomes: At the end of the course, the students should be able to :

MCA203.1	Comprehend the basic concepts of computer networks and data communication systems.
MCA203.3	Analyze basic networking protocols and their use in network design
MCA203.3	Explore various advanced networking concepts.

Syllabus

Sr. No	Module / Unit	Detailed Contents	Hours
1	Basics of Digital Communication	Introduction to digital communication, Signal propagation, Signal types, Signal parameters, Switching & forwarding, Transmission impairments, Attenuation, Delay distortion, Noise, Effects of limited bandwidth, Data rate limits-Nyquist's theorem and Shannon's theorem.	05
2	Network Organization and Models	Basics of computer Network, topology & types of topologies, types of networks(LAN, MAN, WAN), Concept of Intranet & Extranet, Ad-Hoc Networks, types of communications (Asynchronous and synchronous), modes of communications (simplex, half duplex, full duplex), Protocols, Networking models, ISO-OSI Reference Model, Design issues of the layer ,Internet Model (TCP/IP), Comparison of ISO-OSI & TCP/IP Model	06
3	Networking Devices	Connectivity Devices : Passive & Active Hubs, Repeaters, , Switches (2-Layer Switch, 3-Layer switch(Router), Bridges (Transparent Bridges, Spanning Tree, Bridges, Source Routing Bridges) , Brouters, Gateways.	04
4	Application, Presentation & Session Layer	Principles of Application Layer Protocols, The Web and HTTP, FTP, Telnet, Electronic Mail in the Internet (SMTP, MIME, POP3, IMAP), DNS, Introduction to SNMP.	06
5	Transport layer	Transport-Layer Services, port addressing, Multiplexing and Demultiplexing, Principles of Reliable Data Transfer, Congestion Control, TCP's Congestion Control. Quality of Service : Introduction, Queue Analysis, QoS Mechanisms, Queue management Algorithms, Feedback, Resource, Reservation.	10
6	Network layer	Network Service Model, Data gram & Virtual Circuit, Routing Principles, The Internet Protocol,(ipv4 & ipv6), IP addressing and subnetting, Routing Algorithms., Hierarchical Routing, Routing in the Internet: Intra and inter domain routing; Unicast Routing Protocols RIP, OSPF, BGP, Multicast Routing Protocols : MOSPF, DVMRP. ATM Networks: Need for ATM, ATM Layers, ATM adaptation Layers, IP over ATM, Multi protocol Label switching (MPLS), Drawbacks of traditional routing methods, Idea of TE, TE and Different Traffic classes	11
7	Data Link Layer	Data Link Layer, Error Detection and Correction Techniques, Multiple Access Protocols, LAN Addresses and ARP & RARP, PPP: The Point-to-Point Protocol, Ethernet standards – IEEE 802.3, 802.5, FDDI, 802.6.	08
8	Physical layer	Physical Layer, Types of media wired and wireless media	02

Some basic knowledge of accounting and good mathematical skills is recommended.

Course Educational Objectives (CEO):

CEO 1	Introduce the principles, concepts, and applications of financial accounting and
	management.
CEO 2	Explore, and use the accounting concepts emphasizing how financial statements communicate information about the business corporation's performance and position for users internal and external to management.
CEO 3	To introduce the underlying framework and concepts of Financial Accounting and Management and how these fit into the current global business scenario.

Course Outcomes: At the end of the course, the students should be able to:

To use accounting functions as an information development and communication system that supports economic decision making and provides value to entities and
Preparation of financial statements and related information and apply analytical tools in making both business and financial decisions.
To analyze the impact of accounting system on several business functions and managers' decision making.
To analyze and use financial statements; prepare budgets and investment options; assess risks and the rewards involved in firm's financial decisions.

Syllabus

Sr No.	Module	Detailed Contents	Hours
1	Introduction to Accounting	Introduction to Accounting:– Principles, Concepts, Double entry system of accounting, introduction to journal, voucher, ledger; preparation of trial balance, final accounts, trading and profit and loss account and balance sheet.(theory and numerical) Accounting Standards - AS1, AS2, AS3,AS9(only Theory), IFRS (International Financial Reporting Standards)	12
2	BEA and Budgeting	Break-even Analysis:-Concept of Break Even Point, Cost- Volume-Profit Analysis, Determination of Break Even Point, Margin of Safety and PV ratio, Impact of changes in Cost or selling price on BEP - Practical applications of Break-even Analysis. Budgeting: Budgeting–cash budget (theory and numerical), sales budget – flexible Budgets and master budgets (theory).	12
3	Financial Management Concepts	Financial Management:–Meaning and scope, Objectives of time value of money, goals of FM, profit vs. value maximization. Leverages – operating, financial, composite.; cost of equity, preference and equity shares, bonds and debentures, weighted average cost of capital, capital gearing fundamentals.	10
4	Tools and Techniques of FM	Tools and Techniques for Financial Statement Analysis:- Ratio Analysis – Classification of Ratios – Short term solvency and long term solvency – Profitability ratios - Analysis and Interpretation of Financial Statements through ratios of Liquidity, Solvency and Profitability. Fund Flow Statement - Meaning, Importance, Statement of changes in working capital and statement of Sources and application of funds. Cash flow Analysis:- cash flow Statements: Preparation,	10

5	Capital	Capital Budgeting:- Capital and its significance, Types of 8
	Budgeting	Capital, Estimation of Fixed and Working capital requirements,
	Concepts	Methods and sources of raising capital. Capital Budgeting: features of capital budgeting proposals, Methods of Capital Budgeting: Payback Method; purpose of capital budgeting, capital budgeting process, and types of capital investment decisions. Accounting Rate of Return (ARR) and Net Present Value Method (simple numerical problems on these).

Basic knowledge of mathematics

Course Educational Objectives (CEO):

CEO 1	To Understand the fundamental ideas of Discrete Mathematics
CEO 2	To Express the decision making concepts as a mathematical model
CEO 3	To Study and identify a real life business problem and computing requirements
	appropriate to its solution

Course Outcomes: At the end of the course, the students will be able to:

MCA205.1	Develop mathematical and logical thinking
MCA205.2	Model situations from variety of settings in generalised mathematical form
MCA205.3	Solve the real world business problem

Syllabus

Sr	Module	Detailed Contents	Hours
1	Mathematical	Propositions and logical operations, Conditional Statements,	8
	logic	Methods of Proof, Mathematical Induction, Mathematical	
		Statements, Logic and Problem Solving, Normal Forms	
2	Sets and	Set operations and functions, Product sets and partitions,	10
	Relations	Relations and digraphs, Paths in Relations and Digraphs,	
		Properties of Relations, Equivalence Relations, Operations	
		on Relations, Partially Orders Sets, Hasse diagram	
3	Graphs	Graph, Representation of Graph, Adjacency matrix,	5
		Adjacency list, Euler paths and Circuits, Hamiltonian Paths	
		and Circuits	
4	Mathematical	Mathematical Models - Vehicular Stopping Distance	8
	Models	Modeling using decision theory : Probability and Expected	
		Value (e.g. Rolling the Dice, Life Insurance, Roulette etc)	
		Decision Trees, Classification problems using Bay's	
		theorem	
5	Modeling using	Recurrence relation - Fibonacci series, Tower of	10
	difference	Hanoi ,Lines in a plane Homogenous linear equations with	
	equation	constant coefficients, Particular Solution, Total Solution,	
		Divide and Conquer Recurrence Relations (Fast	
		Multiplication of Integers, Fast matrix Multiplication)	
6	Characteristics	Number of Possible Solutions, Time-Changing Environment,	4
	of Complex	Problem-Specific Constraints, Multi-objective Problems,	
	Business	Modeling the Problem A Real-World Examples,	
_	Problems		-
7	MADM &	Introduction to Multiple Attribute Decision-making	7
	MCDM	(MADM) Multiple Attribute Decision-making Methods,	
		Simple Additive Weighting (SAW) Method, Weighted	
		Product Method (WPM), Analytic Hierarchy Process (AHP)

Assessment:

Internal:

Assessment consists of two tests (T1 and T2) .The final marks should be the average of the two tests.

End Semester Theory Examination: Guidelines for setting up the question paper.

- 1. Question paper will comprise of total six questions.
- 2. Question Number One should be compulsory.
- 3. All question carry equal marks.
- 4. Students can attempt any three from the remaining.
- 5. Questions will be mixed in nature (for example supposed Q.2 has part (a) from module 3 then part (b) will be from any module other than module 3).

In question paper weightage of each module will be proportional to number of respective lecture hours as mention in the syllabus.

Subject	Subject Name	Teaching Scheme (Contact Hours per week)		Credits Assigned				
Code		Theory	Pract.	Tut.	Theory	Pract.	Tut.	Total
MCA L201	Operating System and Computer Networks Lab (OS and CN Lab)		06			03		03
		Exami	nation Sch	eme				
	I	End Sem. Exa	am. [Once	in a sen	nester]			
Laboratory Name					Term Work	Pract.	Oral	Total
MCA L201 Operating System and Computer Networks (OS and CN Lab)				tworks	25	50	25	100

Pre-requisites: Basic overview of Computer and Computer Networking principles.

Course Educational Objectives (CEO):

CEO 1	To study the various user level and administrator level commands in operating
	system.
CEO 2	To learn shell script and AWK programming.
CEO 3	To make the learner aware of the practical issues and various networking devices
	with their interconnections and configurations.
CEO 4	To equip the learner with a hands-on experience of designing various networking
	applications.

Course Outcomes: At the end of the course, the students will be able to :

MCAL201.1	Apply various operating system commands.
MCAL201.2	To write a shell script and awk programming.
MCAL201.3	Design network for any business requirement.

Syllabus :

Sr.No.	Session	Contents	Hrs
1	Operating	Installation of Operating System with configuration, Disk	4
	System Basics	fragmentation & partitioning, Linux introduction and file	
		system - Basic Features, Advantages, Installation	
		requirements, Basic Architecture of Unix/Linux system,	
		Kernel, Shell, System administration Commands	

2	Basic OS	Basic commands, Commands for files and directories cd, ls,	8
	Commands	cp, md, rm, mkdir, rmdir, more, less, Creating and viewing files using 'cat', File comparisons, View files. Essential Linux commands. Understanding shells, Processes in Linux-process	
l		fundamentals, connecting processes with pipes, Redirecting	
l		input output, manual help, Background processing, managing	
1		multiple processes, changing process priority, scheduling of	
l		processes at command, batch commands, kill, ps, who, sleep,	
l		Printing commands, find, wc, Cal, banner, touch, file, dd, Mathematical commands- bc, expr, factor, units. vi, vim editor	
3	Filter	Filter related commands-sort, grep, sed, head, tail, cut, paste,	8
-	Commands	uniq	Ŭ
l		Disk commands-disk related commands, checking disk free	
		spaces	
4	Shell	Shell programming :- Shell programming, Basic of shell	8
1	Programming	programming, Various types of shell, shell programming in bash, conditional and looping statements, case statements,	
l		parameter passing and arguments, Shell variables, shell	
l		keywords, Creating Shell programs for automate system tasks	
l		and report printing, use of grep in shell	
5	Advanced	Advanced Shell scripting-basic script functions, returning a	6
l	Shell Scripting	value, using variables in functions, array and variable	
		functions, function recursion, creating text menus	0
6	Awk	Study of gcc & basic Awk Programming-variables,	8
l	programming	expressions, built in variables, printf, storing in a file using -f option, comparison operator, BEGIN and END sections	
1		Awk Programming-arrays, functions, if statement, looping	
7	OS Security	Securing Linux on a network-managing network services,	4
l	·	controlling access to networks with nmap, implementing	
		firewalls	
8	Introduction to	Study of Packet Tracer software interface, Basic Configuration	4
l	packet tracer	of console, Router & Switches, Assigning IP v4 & IP v6	
9	Routing	addresses to the interfaces of the routers, Subnetting /notation Configure Static and default routing, RIPv2, EIGRP, OSPF	4
9	Techniques	Configure Static and default fouring, Kli v2, EfOKI, OSI F	-
10	Dynamic	Configuration of DCHP, Access List Configuration,	6
l	configuration	Configuration of NAT, Static, Dynamic and PAT	
11	Authentication	Configuration of PPPoE (PAP, CHAP), Configure VLANs on	4
l	and VLAN	the router, InterVLAN, Router on stick, multilayer VLAN,	
l		Spanning tree.	
14	Network	Configure Telnet, DNS, HTTP, SMTP, FTP Servers, SNMP	4
	Protocol

Applicat	Application Development using Open Source Tools								
	Lab								

Pre-requisites: Basic understanding of fundamentals of any programming language and web technology

Course Educational Objectives (CEO):

CEO 1	To study various linear and non-linear data structures.
CEO 2	To provide knowledge for developing web applications using AJAX framework and
	open source tools.
CEO 3	To conceptualize effective storage mechanism for data and accessing it through web
	applications.

Course Outcomes: At the end of the course student will be able to

MCAL202.1	Effectively select the data structure model to be used for the real world problem.
MCAL202.2	Develop web based applications using AJAX framework and open source tools.
MCAL202.3	Build web application with effective storage mechanism for data.

Syllabus

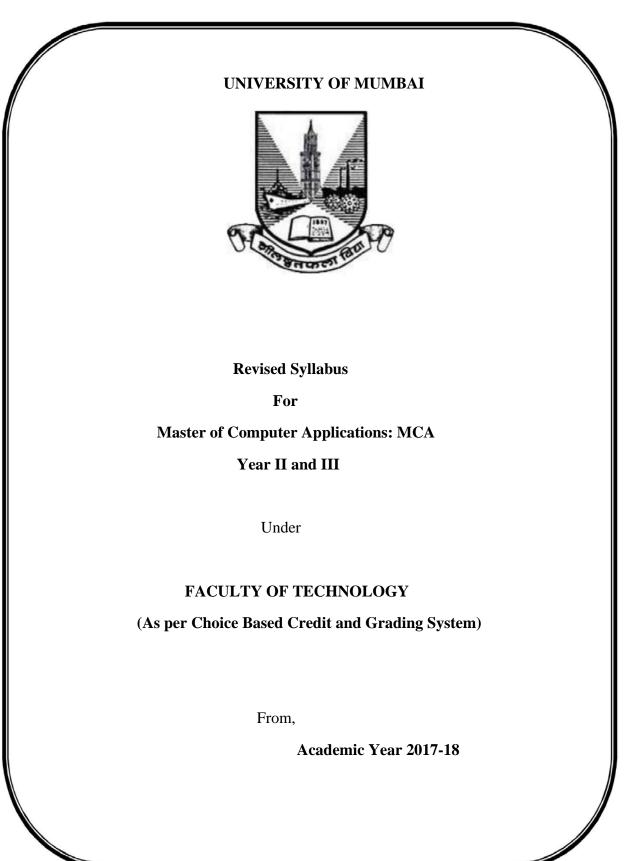

Sr.	Session	Detailed Contents	Hours
No.			
1.	Sorting	Bubble Sort, Insertion Sort, Selection Sort, Shell Sort, Radix	04
		Sort	
2.	Searching	Linear Search, Binary search	02
3.	Stacks	Array implementation, Linked List implementation, Evaluation	04
		of postfix expression	

4.	Queue	Simple Queue, Linked List implementation of ordinary queue,	08
		Linked List implementation of circular queue, BFS, Linked	
		List implementation of priority queue, Double ended queue	
5.	Linked lists	Singly Linked Lists: Insert, Display, Delete, Search, Count,	08
		Reverse	
		Circular Linked List: Insert, Display, Delete, Search, Count,	
		Reverse	
		Doubly Linked Lists : Insert, Display, Delete, Search, Count,

AC : Item No.

From Co-ordinator's Desk:

To meet the challenge of ensuring excellence in Master Program in Computer Applications (M.C.A.: referred as Master of Computer Applications) education, the issue of quality needs to be addressed, debated and taken forward in a systematic manner. Accreditation is the principal means of quality assurance in higher education. The major emphasis of accreditation process is to measure the outcomes of the program that is being accredited. Inline with this Faculty of Technology of University of Mumbai has taken a lead in incorporating philosophy of outcome based education in the process of curriculum development.

Faculty of Technology, University of Mumbai, in one of its meeting unanimously resolved that,

Each Board of Studies shall prepare some Program Educational Objectives(PEO's) and give freedom to affiliated Institutes to add few (PEO's) and course objectives and course outcomes to be clearly defined for each course, so that all faculty members in affiliated institutes understand the depth and approach of course to be taught, which will enhance learner's learning process. It was also resolved that, maximum senior faculty from colleges and experts from industry to be involved while revising the curriculum. I am happy to state that, each Board of studies has adhered to the resolutions passed by Faculty of Technology, and developed curriculum accordingly. In addition to outcome based education, semester based credit and grading system is also introduced to ensure quality of Master of Computer Applications (MCA) education.

Semester based Credit and grading system enables a much required shift in focus from teacher centric to learner centric education since the workload estimated is based on the investment of time in learning and not in teaching. It also focuses on continuous evaluation which will enhance the quality of education. University of Mumbai has taken a lead in implementing the system through its affiliated Institutes and Faculty of Technology has devised a transparent credit assignment policy and adopted ten points scale to grade learner's performance. Choice Based Credit and Grading System are implemented for First Year of Master of Computer Applications (M.C.A.) from the academic year 2016-2017. Subsequently this system will be carried forward for Second Year and Third Year of M.C.A. in the academic year's 2017-2018 and 2018-2019 respectively.

Dr. S. K.Ukarande

Co-ordinator, Faculty ofTechnology, Member AcademicCouncil University of Mumbai,Mumbai

Preamble:

The MCA Choice based syllabus is designed considering various modes of effective teachinglearning and assessment that reflect in its interdisciplinary approach required for advanced application course. This integrated teaching methodology allows understanding of interaction between the different business areas required for IT enabled industries. This methodology also allows students to develop multiple skills such as critical logic analysis, numerical ability, Database programming, Algorithmic optimization with testing, networking, report writing, communication skill, presentation skills,independent research,and working with real-life case studies. These skills further enable the students to take a full, active and responsible role in the IT enabled industries.

The syllabus is directional in wide scope and allows the much desired flexibility to keep speed with the ever growing body of knowledge and explorations in IT enabled industries considering human side of enterprise. The course structures are carefully designed so that students get superiority in dealing with diverse situations when they step into the corporate world.

I would like to extend my thanks to Industries like IBM India Pvt. Ltd., Accenture, RBS India Pvt.Ltd., Myglamm, N.I.C. etc for their valuable inputs to strength the scope and contents of the syllabus. I would also like to extend my thanks to all M.C.A. Faculty members for their contribution in designing an outcome based curriculum.

Dr.Dhananjay R.Kalbande

Chairman- Ad-hoc Board of Studies of Computer Application, Member- Academic Council, University of Mumbai, Mumbai.

Basic Knowledge of data structures

Course Educational Objectives (CEO): At the end of the course, the students will be able to

CEO301.1	Emphasize on basic concepts to organize, maintain and retrieve information from a
	DBMS.
CEO301.2	Cover the principles of database systems and recognize how they are used in
	developing data-intensive applications.
CEO301.3	To study an effective and efficient database system with the help of the rising
	trends of parallel and distributed databases.

Course Outcomes: At the end of the course, the students will be able to

MCA301.1	Understand various database concepts and apply them in real life applications.
MCA301.2	Determine the manner in which data can be stored, organized and manipulated in a
	database system.
MCA301.3	Apply various indexing and optimization techniques to process queries.
MCA301.4	Analyze and design database applications using suitable database techniques.

Syllabus

Sr.	Module	Detailed Contents	Hrs
No.			06
1	Overview of		06
	DBMS	DBMS, Advantages of DBMS, View of data: Data Abstraction,	
		Instances and Schemas, Data Models, Database Languages,	
•		Structure of DBMS, Role of DBA	0.6
2	Database	Overview of design process: Entity Relationship Model,	06
	Design using	Constraints, Entity relationship Diagram, Entity Relationship	
	ER Model and	Design Issues, Weak Entity Sets, Extended ER features	
	Relational	The Relational Model: Concepts of Relational Models, Integrity	
	Model	Constraints over Relations, Enforcing Integrity Constraints,	
		Querying Relational data, Logical Database Design: ER to	
		Relational with Case Studies	
3	Normalization	Informal Design Guidelines for Relational Schema, Functional Dependencies	08
		Normal forms: First, Second, Third Normal Form and	
		BCNF.Introduction to De-normalization. Inference Rules for	
		Functional Dependencies, Equivalence of Sets of Functional	
		Dependencies, Minimal Set of Functional Dependencies, Properties	
		of Relational Decomposition-Dependency Preservation, Lossless	
		Join.	
4	Indexing	Overview of indexing : Clustered Indexes, Primary and Secondary	10
-	muching	Indexes, Index Data Structures	10
		Tree structured indexing : Intuition for Tree Indexes, Indexed	
		Sequential Access Methods, B+ Trees, Search, Insert, Delete,

			20	20	20	80				100

Basic understanding of any Object Oriented Programming Language.

Course Educational Objectives (CEO): At the end of the course, the students will be able to

CEO302.1	Understand fundamentals of object-oriented programming in Java.
CEO302.2	Study various Java programming constructs.
CEO302.3	Learn application development using Java Components.

Course Outcomes (CO): At the end of the course, the students will be able to

MCA302.1	Solve computational problems using basic constructs.	
MCA302.2	Find a solution for real world problems using Java	
MCA302.3	Develop Web Applications using Server Side Programming.	

Sr. No.	Module	Detailed Contents	Hrs
1.	Fundamentals of Java Programming	Features of Object-oriented Programming, History of Java, Features of Java, JVM Architecture, Differences between C++ and Java,Data types, variable, expressions, operators, control structures, arrays	03
2.	Object and Classes	Classes, Instance variables, Methods, Constructors, Access Specifiers, Abstract Classes and Wrapper Classes, Autoboxing and Unboxing, Inheritance, Polymorphism, Method Overriding, Use of Static, final, super and this keyword, Garbage collection and finalize method, string and mutable string, Inner Classes	04
3.	Packages and Interfaces	Package concept, Creating user defined package, Access control protection, Defining interface, Implementing interface.	02
4.	Generics and Collections	Generics - Generic Class, Creating Generic Classes, Generic Methods, Bounded Type, Collections- Collections and Generics, Collection Classes-Links, Vector, Linked Lists, Maps, HashMap, WildCards, LambdaExpressions - Lambda Type Inference, Lambda Parameters, Lambda Function Body, Returning a Value From a Lambda Expression, Lambdas as Objects	05
5.	Exception Handling	Exception handling fundamentals, Exception types, Exception as objects, Exception hierarchy, Exception Keywords - Try, catch, finally, throw, throws, Creating User defined Exceptions, Assertion, Annotations	04
6.	Multi- threading	Java thread model, Life Cycle of Thread, Working with Thread class and the Runnable interface, Thread priorities, ThreadGroup class, Inter thread communication, Synchronization.	04
7.	File handling	Input streams and Output streams, FileInputStream and FileOutputStream, Binary and Character streams, Buffered Reader/Writer, Object serialization and Deserialization.	04
8.	Event handling and GUI programming	Comparison of AWT and SWING, Applet class, Applet API hierarchy, Life cycle of Applet, Delegation Event Model, Event handling mechanisms, Swing components, Swing Component Hierarchy- Basic and Advanced Components, JApplet, Layout managers, Adapter class, Inner class.	05
9.	Database Programming	JDBC architecture, Types of drivers, Java.sql package, Establishing connectivity and working with connection interface, Working with statement interface, Working with PreparedStatement interface, Working with ResultSet interface, Working with ResultSetMetaData interface.	05
10.	Web development using Servlets	Introduction to servlets, Servlet vs CGI, Servelet API overview, Servlet Life cycle, Generic servlet, HTTPServlet, ServletConfig, ServletContext, Handling HTTP Request and response –GET / POST method, request dispatching, Using cookies, Session tracking	06
11.	Web development using JSP	Introduction to JSP, JSP Architecture, JSP Directives, JSP scripting elements, Default objects in JSP, JSP Actions, JSP with beans and JSP with Database, Error handling in JSP, Session	06

		tracking techniques in JSP, Introduction to custom tags, JSTL tags in detail	
12.	Introduction to	Introduction to Spring Framework, Spring Architecture, Spring	04
	Spring	Aspect of Object Oriented Concepts – Join Point and Point Cuts.	
	Frameworks

Assessment:

Internal:

Assessment consists of two tests (T1 and T2) .The final marks should be the average of the two tests.

End Semester Theory Examination: Guidelines for setting up the question paper.

- Question paper will comprise of total six questions.
- Question Number One should be compulsory.
- All question carry equal marks.
- Students can attempt any three from the remaining.
- Questions will be mixed in nature (for example supposed Q.2 has part (a) from module 3 then part (b) will be from any module other than module 3).

In question paper weightage of each module will be proportional to number of respective lecture hours as mention in the syllabus.

Computer Networks, Databases

Course Educational Objectives (CEO): At the end of the course, the students will be able to

CEO303.1	Understand information assurance as practiced in computer operating systems,						
	distributed systems, networks and representative applications.						
CEO303.2	Study cryptography and key encryption techniques used today.						
CEO303.3	Comprehend relevant security parameters in the internet, web, database systems and applications						

Course Outcomes (CO): At the end of the course, the students will be able to

MCA303.1	Understand the requirement of information security and a clear understanding of						
	its importance						
MCA303.2	Be familiar with information security threats and countermeasures, and familiar						
	with information security designs using available secure solutions						
MCA303.3	Use the database security mechanisms, intrusion detection systems, formal						
	models of security, cryptography, network ,web security						

Syllabus

Sr. No.	Module	Detailed Contents	Hrs
1	Introduction	Principles of Security, Attacks, Services and Mechanisms, Integrity check, digital Signature, authentication.	03
2	Cryptography	Private Key Cryptography: Block Encryption, DES Algorithm, Problems with DES, Variations of DES, IDEA Algorithm, Uses of Secret key Cryptography; ECB, CBC, OFB, CFB Public Key Encryption : RSA Symmetric and Asymmetric Key Cryptography together	08
3	Authentication	Types of Authentication- Password-based authentication, address-based authentication, cryptographic authentication, smart cards, biometrics, mutual authentications, reflection attacks, Message Digest : MD5 ,SHA,MAC ,HMAC, Digital Certificate process, KDC-working, multi domain KDC, Kerberos	10
4	Internet Security	Transport Layer Security: SSL, SET Email Security : PGP, S/MIME, Comparison, IP security : IPSec, Web Services Security : XML, SOAP, WSDL and UDDI, SSI, WS-Security, SAML, Ws-Trust, WS-Security Policy	08
5	Intrusion Prevention andDetection:	Introduction, Intrusion Detection Systems, Prevention versus Detection, Types of Intrusion Detection systems, DOS attacks, Flooding Attacks, DdoS Attack Prevention/Detection, Defenses Against Denial-of-Service Attacks, Malware Detection	06
6	Database Security	The Need for Database Security, Database Access Control, Inference, Statistical Databases, Database Encryption,	05
7	Firewalls	Characteristics, Packet filters, Application Level Gateways, Circuit Level Gateways, Firewall Architectures, Trusted System,	06
8	IEEE 802.11 Wireless LAN Security	Background, Authentication: Pre- WEP Authentication, Authentication in WEP, Authentication and key agreement in 802.11i, Confidentiality and Integrity: Data protection in WEP, Data protection in TKIP and CCMP	06

Basic knowledge of Mathematics and Statistics.

Course Educational Objectives (CEO): At the end of the course, the students will be able to

CEO304.1	Study formulation, analysis and solving science, engineering and business problems.
CEO304.2	Study mathematics and mathematical modelling using computers to forecast the
	implications of various choices.
CEO304.3	Study the selection of the best alternatives from the available choices.

Course Outcomes (CO): At the end of the course, the students will be able to

MCA304.1	Apply Operations research methodology to a broad range of problems in business and industry.
MCA304.2	Use mathematics and mathematical modelling using computers to forecast the implications of various choices.
MCA304.3	Solve optimization problems.
MCA304.4	Think of new methods for solving optimization problems.

Syllabus

Sr No	Module	Detailed Contents	Hrs
1	Nature of Operation	History ,Nature of Operation Research ,Impact of	01
	Research	Operation Research, Application Areas	
2	Overview of Modeling	Formulating the problem, Constructing a mathematical	02
	Approach	model, Deriving a solution, Testing a model and the solution, Establishing control over the solution, Implementation issues	
3	Linear Programming	Introduction ,Graphical solution, Graphical sensitivity analysis, The standard form of linear programming problems, Basic feasible solutions, Simplex algorithm, Artificial variables, Big M and two phase method, Solution to Problems based on Degeneracy, Alternative optima, Unbounded solution, Infeasible solutions.	12
4	Dual Problem	Relation between primal and dual problems, Dual simplex method, Sensitivity analysis.	05
5	Transportation Problem	Starting solutions. North-west corner Rule – least cost methods – Vogel's approximation method, MODI Method, Minimization and Maximization problem	05
6	Assignment Problem &Travelling Salesman	Assignment Problem: Hungarian method (Minimization and Maximization)	05
	Problem	Traveling Salesman Problem: Branch & Bound technique, Hungarian method	
7	Sequencing Problem	Two machines n jobs , three machines n jobs, n machines m jobs	03
8	PERT and CPM	Arrow network ,Time estimates, earliest expected time, latest allowable occurrence time, latest allowable occurrence time and slack time, Critical path, Probability of meeting scheduled date of completion of project, Calculation of CPM network ,Various floats for activities, Project crashing.	06
9	Replacement Theory	Replacement of items that deteriorate, Replacement of items that fail group replacement and individual replacement.	04
10	Integer Programming	Branch and Bound Algorithm, Cutting plane Algorithm	06
11	Game Theory	Two person Zero sum games, Solving simple games.	03

Basic Knowledge of SQL and Software Engineering concepts

Course Educational Objectives (CEO): At the end of the course, the students will be able to

CEOL301.1	Make the students understand basic and relatively advanced issues in modern database management, information storage and retrieval.
CEOL301.2	Study various database techniques in developing data-intensive applications.
CEOL301.3	Explore the need of software testing in current industry scenario, understanding
	and knowledge of foundations, techniques and tools in area of software.
CEOL301.4	Understand the essential characteristics requirements and usage of Automation
	tools.

MCAL301.1	Design database systems using available tools.									
MCAL301.2	Develop applications using basic and modern database techniques as per									
	organization requirements.									
MCAL301.3	Demonstrate software testing tools									
MCAL301.4	Create test design documents and test reports									

Sr. No.	Module	Detailed Contents	Hrs					
1	DDL and DML	Truncate						
	Constraints	Data Manipulation Language: Insert, Update, Delete, Select Not Null, Unique Key, Primary Key, Foreign Key, Check, adding and Dropping a Constraint	02					
2	Data Control Language and Transaction Control	Grant, Revoke, Roles Commit, Rollback	02					
3	SQL SELECT Statements	T Column Alias, Concatenation Operator, Arithmetic Operators, ComparisonConditions, Logical Conditions, ORDER BY Clause						
4	Functions And Subquery	ns Single Row Functions, Character Functions, Number Functions, 0 Date Functions, Conversion Functions, Aggregate functions						
5	Joins and other concepts	Equijoins, Non-Equijoins, Self Joins, Left Outer Joins, Right Outer Joins, Full Outer Joins, Natural Joins Other Concepts: View, Index	06					
6	PL/SQL Practical	 Programming: Variables, Identifiers, Comment, PL/SQL Block Structure IF Statements: Simple IF Statements, Compound IF Statements IF-THEN-ELSE Statements Loop: Basic Loop, WHILE Loop, FOR Loop 	06					
7	Cursor and Trigger	Cursor: Types of Cursor, Explicit Cursor Attributes Trigger: Trigger, Statement Trigger, Row Trigger, Using Conditional Operations.	06					
8	Functions, Procedures and packages	Create Function, Function with Arguments, Executing Function, Dropping Function Procedures: Block Structure of Subprogram, Types of Subprograms, Procedurewith Parameters, Executing Procedures, Dropping Procedures Packages: Package Specification, Package Body, Creating Package, Execution, Dropping Package	06					
9	Parallel and distributed database	Implementation of different types of Partitions : Range, Hash, List. Distributed Database: Horizontal, Vertical fragmentation	04					
10	Object Oriented database	Implementation of Abstract Data Type, Inheritance, Reference	04					
11	Manual Testing	• Study of Reviews (Writing Test cases, Testing Framework, Canual Test Document)						

12		 Implementation of Test Cases using Equivalence Class Partitioning, Boundary Value Analysis. State Transition Test, Cause Effect Graphing and Decision Table Technique. 	04			
13	Automation Testing	 Study of Automation Tools. Building Test Cases. Using Base URL to Run Test Cases in Different Domains 	06			
14		 Selenium commands-selenese Matching Text Patterns Performance Testing Concepts :Load Testing, Stress Testing 				
15		 Web Driver Implicit & Explicit Wait Cross Browser Testing API Testing 	06			

Note: Automation software testing practical's can be performed using open source tool like selenium.

Basic understanding of programming fundamentals and software engineering.

Course Educational Objectives (CEO): At the end of the course, the students will be able to

CEOL302.1	Understand, developing, testing and debugging Java programs.
CEOL302.2	Study UML tools
CEOL302.3	Explore object-oriented design using UML

MCAL302.1	Develop a simple software application using the object oriented approach.
MCAL302.2	Design and develop a Java Web Applications.
MCAL302.3	Apply UML tools for object oriented software modeling.

Sr. No.	Module	Detailed Contents	Hrs.			
1	Fundamentals of Java Programming	Program on creation of classes and using different types of function. Program using constructor/method overloading Program on passing Object as parameter to a function Program using static and final variable and methods	02			
2	Objects and Classes	Program to perform different operations on Array and String Program using Interface and Inheritances. Program using Wrapper class to cover auto boxing and un boxing				
3	Packages and Interfaces	Programs based on creating and using packages along with access control specification. Programs based on defining, creating and implementing interfaces.	04			
4	Generics, Collections and Lambda Expression	Programs based on Generics, Collections and Lambda Expression	04			
5	Exception Handling	Programs based on exception handling mechanism covering all keywords. Programs based on creating own exceptions.	04			
6	Multi-threading	Programs based on Multithreading approach, thread priorities, Inter thread communication, and Synchronization.	04			
7	File Handling	Programs based on Input streams and Output streams, FileInputStream and FileOutputStream, Binary and Character streams, Buffered Reader/ Writer, Object serialization and Deserialization.	04			
8	Event handling and GUI programming	Programs based on designing GUI Interface. Programs based on creating an applets, use of containers, components, event handling, layout managers, Adapter classes, Inner class etc.	04			
9	Database Programming	Programs based on database connectivity using MS-Access/ Oracle/ MySQL as a backend covering all the database operations.	04			
10	Web development using Servlets	Programs based on handling request and response –GET / POST method, Programs based on cookies	04			

		and Session tracking.	
11	Web development using JSP	Programs demonstrating JSP Syntax and semantics. Programs based on directives and error objects. Programs based on session tracking.	04
12	Introduction to Spring Frameworks	Basic programs based on Spring framework	03
13	Introduction to UML	UML Overview, The Nature and purpose of Models	01
14	Modeling Requirements: Use Cases	Capturing a System Requirement, Use Case Relationships, Use Case Overview Diagrams	02
15	Modeling System Workflows: Activity Diagrams	Activity Diagram Essentials, Activities and Actions, Decisions and Merges, Doing Multiple Tasks at the Same Time, Time Events, Objects, Sending and Receiving Signals, Starting an Activity, Ending Activities and Flows, Partitions (or Swimlanes), Managing Complex Activity Diagrams	02
16	Modeling a System's Logical Structure: Introducing Classes and Class Diagrams Modeling a System's Logical Structure: Advanced Class Diagrams	What is a Class?, Getting Started with Classes in UML, Visibility, Class State: Attributes, Class Behavior: Operations, Static Parts of Your Classes Class Relationships, Constraints, Abstract Classes, Interfaces, Templates	02
17	Bringing Your Classes to Life: Object Diagrams	Object Instances, Links, Binding Class Templates	01
18	Modeling Ordered Interactions: Sequence Diagrams	Participants in a Sequence Diagram, Time, Events, Signals, and Messages, Activation Bars, Nested Messages, Message Arrows, Bringing a Use Case to Life with a Sequence Diagram, Managing Complex Interactions with Sequence Fragments,	02
19	Focusing on Interaction Links: Communication Diagrams Focusing on Interaction Timing: Timing Diagrams	Participants, Links, and Messages, Fleshing out an Interaction with a Communication Diagrams, Communication Diagrams Versus Sequence Diagrams What Do Timing Diagrams Look Like?, Building a Timing Diagram from a Sequence Diagram, Applying Participants to a Timing Diagram, States, Time, A Participant's State-Line, Events and Messages, Timing Constraints	02

20	Completing the Interaction Picture: Interaction Overview Diagrams	The Parts of an Interaction Overview Diagram, Modeling a Use Case Using an Interaction Overview	01
21	Managing and Reusing Your System's Parts: Component Diagrams	What is a Component?, A Basic Component in UML, Provided and Required Interfaces of a Component, Showing Components Working Together, Classes That Realize a Component, Ports and Internal Structure, Black-Box and White-Box Component Views	02
22	Modeling an Object's State: State Machine Diagrams	Essentials, States, Transitions, States in Software, Advanced State Behavior, Composite States, Advanced Pseudostates, Signals, Protocol State Machines	02
23	Modeling Your Deployed System: Deployment Diagrams	Deploying a Simple System, Deployed Software: Artifacts, What Is a Node?, Hardware and Execution Environment Nodes, Communication Between Nodes, Deployment Specifications, When to Use a Deployment Diagram	02
24	UML tools and techniques for web-based/object oriented Applications	UML Tools, Different UML Notations for Web application	02
25	Creation of documentation such as SRS, SDS from UML diagrams. Generation of code from UML model.	Basic Concept, Generating by Templates, Using Batches, Installing and Uninstalling Templates	02
26	Mini Project	A Mini – Project based on Java Programming and UML using an integrated approach. (Maximum Two students in a Group).	10

Course Educational Objectives (CEO): At the end of the course, the students will be able to

CEOPR301.1	Conceptualize knowledge with emphasis on team work, effective							
	communication, critical thinking and problem solving skills.							
CEOPR301.2	Adapt to a rapidly changing environment by having learned and applied new							
	skills and new technologies.							
CEOPR301.3	Study designing small projects in a multidisciplinary environment.							

MCAPR301.1	Design, implement and evaluate a mini-project.
MCAPR301.2	Gain project management skills.
MCAPR301.3	Work effectively in small groups on medium scale computing projects.
MCAPR301.4	Demonstrate the ability to produce a technical document

Sr.	Module	Detailed Contents
No.		
1	Introduction	• Introduction of the project(SRS)
		Problem definition
		Objective of Project
		• scope of Project

Basic knowledge of data base concepts

Course Educational Objectives (CEO): At the end of the course, the students will be able to

CEO401.1	Acquire the knowledge of various concepts and tools behind data warehousing and mining data for business intelligence					
CEO401.2	Study data mining algorithms, methods and tools					
CEO401.3	Identify business applications of data mining					

MCA401.1	Use conceptualization of BI techniques
MCA401.2	Apply data warehouse concepts for data analysis and report generation
MCA401.3	Develop industry level data mining skills using software tools
MCA401.4	Make use of relevant theories, concepts and techniques to solve real-world BI
	problems

Sr. No.	Module	Detailed Contents	Hrs
1	Business Intelligence-	Introduction and overview of BI-Effective and timely decisions, Data Information and knowledge, BI Architecture, Ethics and BI. BI Applications- Balanced score card, Fraud detection, Telecommunication Industry, Banking and finance, Market segmentation.	06
2	Prediction methods and models for BI	Data preparation, Prediction methods-Mathematical method, Distance methods, Logic method, heuristic method-local optimization technique, stochastic hill climber, evaluation of models	06
3	BI using Data Warehousing	Introduction to DW, DW architecture, ETL Process, Top-down and bottom-up approaches, characteristics and benefits of data mart, Difference between OLAP and OLTP. Dimensional analysis- Define cubes. Drill- down and roll- up – slice and dice or rotation, OLAP models- ROLAP and MOLAP. Define Schemas- Star, snowflake and fact constellations.	08
4	Data Mining and Preprocessing	Data mining- definition and functionalities, KDD Process, Data Cleaning: - Missing values, Noisy data, data integration and transformations. Data Reduction: - Data cube aggregation, dimensionality reduction- data compression, Numerosity reduction- discretization and concept hierarchy.	06
5	Associations and Correlation	Association rule mining:-support and confidence and frequent item sets, market basket analysis, Apriori algorithm, Incremental ARM, Associative classification- Rule Mining.	06
6	Classification and Prediction	Introduction, Classification methods:-Decision Tree- ID3, CART, Bayesian classification- Baye'stheorem(Naïve Bayesian classification),Linear and nonlinear regression.	08
7	Clustering	Introduction, categorization of Major, Clustering Methods:- partitioning methods- K-Means. Hierarchical- Agglomerative and divisive methods, Model- based- Expectation and Maximization.	08
8	Web mining and Text mining	Text data analysis and Information retrieval, text retrieval methods, dimensionality reduction for text. Web Mining: - web content, web structure, web usage.	04

Assessment:

Internal:

Assessment consists of two tests (T1 and T2) .The final marks should be the average of the two tests.

End Semester Theory Examination: Guidelines for setting up the question paper.

- Question paper will comprise of total six questions.
- Question Number One should be compulsory.
- All question carry equal marks.
- Students can attempt any three from the remaining.
- Questions will be mixed in nature (for example supposed Q.2 has part (a) from module 3 then part (b) will be from any module other than module 3).

Internal:

Assessment consists of two tests (T1 and T2) .The final marks should be the average of the two tests. Besides this, students in a group of 3 or 4 have to present a case study compulsorily related to electronic / digital Business likee-chaupal/e-governance /e-tourism/e-Learning/e-real estate/e-Media/ Impact of e-Business on society etc.

End Semester Theory Examination: Guidelines for setting up the question paper.

- Question paper will comprise of total six questions.
- Question Number One should be compulsory.
- All question carry equal marks.
- Students can attempt any three from the remaining.
- Questions will be mixed in nature (for example supposed Q.2 has part (a) from module 3 then part (b) will be from any module other than module 3).

In question paper weightage of each module will be proportional to number of respective lecture hours as mention in the syllabus.

Knowledge of Information Technology, Business System Management, Software and Networking

Course Educational Objectives (CEO): At the end of the course, the students will be able to

MCA4043.1	Study technical aspects of Enterprise Resource Planning (ERP) with its lifecycle.
MCA4043.2	Identify the functionality in an ERP system
MCA4043.3	Understand tools and methodology used for designing ERP for an Enterprise

MCA4043.1	Conceptualize the basic structure of ERP
MCA4043.2	Identify implementation strategy used for ERP
MCA4043.3	Apply design principles for various business module in ERP
MCA4043.4	Apply different emerging technologies for implementation of ERP

Sr. No.	Module	Detailed Contents	Hrs
1	Introduction to Enterprise Resource Planning (ERP)	Information System and Its Components, Value Chain Framework, Organizational Functional Units, Evolution of ERP Systems, Role of ERP in Organization, Three-Tier Architecture of ERP system	08
2	ERP Implementatio n Lifecycle	Project Preparation, Initial Costing, Requirement Engineering, ERP Solution Selection, Technical Planning, Change Management and Training Plan, Implementation and Deployment Planning, Configuration, Custom Coding, Final Preparation, Go-live	08
3	ERP and Related Technologies	Business Processing Reengineering(BPR), Data Warehousing, Data Mining, On-line Analytical Processing(OLAP), Supply Chain Management (SCM), Customer Relationship Management(CRM), Electronic Data Interchange (EDI)	08
4	ERP Manufacturing Perspective	MRP - Material Requirement Planning, BOM - Bill Of Material, MRP - Manufacturing Resource Planning, DRP - Distributed Requirement Planning, PDM - Product Data Management	06
5	ERP Modules	Finance, Plant Maintenance, Quality Management, Materials Management,	08
6	Benefits of ERP	Reduction of Lead-Time, On-time Shipment, Reduction in Cycle Time, Improved Resource Utilization, Better Customer Satisfaction, Improved Supplier Performance, Increased Flexibility, Reduced Quality, Costs, Improved Information Accuracy and Design-making Capability	06
7	Introduction to ERP tools	OpenERP JD Edwards-Enterprise One Microsoft Dynamics-CRM Module SAP	08

Basic knowledge of Organizational behavior& Corporate Governance

Course Educational Objectives (CEO): At the end of the course, the students will be able to

CEO4044.1	Acquire knowledge of Ethics in the modern era
CEO4044.2	Understanding of Ethical decision making approaches.
CEO4044.3	Understand the scope and complexity of Corporate Social responsibility in the global and Indian context.

MCA4044.1	MCA4044.1 Understand ethical theories and ethics in profession.			
MCA4044.2	Analyze global issues in ethics			
MCA4044.3	Apply Ethical Code, Audit and living in real world.			
MCA4044.4	Analyze Corporate Social Responsibility and its framework.			

Sr. No.	Module	Detailed Contents	Hrs
1	Basic Concepts in Ethics & Ethical Theories	Introduction, Terminology, Personal Ethics, Professional Ethics, Life skills, Basic Ethical Principles, Moral Development, Theories-Piaget's Theory, Kohlberg's Theory, Elliot Turiel's Theory, Gilligan's Theory, Comparison of Moral Development Theories.	10
2	Global Issues in Ethics	Classification of Ethical Theories, Some basic Theories Introduction, Current Scenarios, Business Ethics, Environmental Ethics, Computer Ethics, Media Ethics, Bioethics, Research Ethics, Intellectual Property Rights, Professionals & Ethics.	08
3	Ethical Codes	Need for Ethical Codes, Sample codes, Codes from Other Professions, Corporate Codes, Implementation of codes, Limitations of codes.	08
4	Ethics Audit & Ethical Living	Need for Ethics audit, Ethics Profiles of Organizations, Considerations for Ethics Audit, Ethics standards and Benchmarking, Procedure for Ethics audit, Ethics audit Report.Ethical Living, Ethical living for Professionals.	08
5	Understanding Corporate Social Responsibility (CSR), Evolutions of Company & CSR Role of various institutions in CSR	Introduction, Understanding CSR, History of CSR in India. Theories of corporate Governance, Importance of CSR in Corporate Governance, The Social Impact. Introduction, Role of Government, Role of NGO'S & Not- for-profit Organizations, Role of Educational Institutions, Role of the Media.	10
6	Framework for rating CSR & Global CSR.	Understanding CSR ratings, available Accepted Rating Frameworks, Structure of BITC CR Index, Rating Criteria and basic structure of the rating process. Study of Sample Rating Framework for Corporate. Multinational companies, challenges of multinationals, country specific CSR Initiatives.	08

Overview of Probability, Statistics and Discrete Mathematics and basics of Computers.

Course Educational Objectives (CEO): At the end of the course, the students will be able to

CEO4052.1	Understand the basic system concepts and definitions of the types of system.
CEO4052.2	Provides techniques to model and simulate each system.
CEO4052.3	Ability to analyze the system and make use of information to improve its performance.

MCA4052.1	Apply functional modeling to model the activities of a static system.
MCA4052.2	Understand the behavior of a dynamic system and create a model for a dynamic
	system.
MCA4052.3	Simulate the real systems

Sr.	Module	Detailed Contents	Hrs
<u>No.</u> 1	Introduction to Simulation	What is modeling and Simulation: History, Application areas, Advantages and Disadvantages, Role of modeling and simulation for Problem solving, Types of simulation models and examples: static (Monte Carlo simulation and its application to industries), dynamic (Bank), deterministic (arrivals at scheduled appointment time), stochastic (random arrivals and service time), Discrete event simulation (queuing system), continuous (communication and traffic system). Steps in simulation study. Uses of simulation with examples(Experimentation, experience, ethics, human interaction).	04
2	Description and solutions of simulation examples	Simulation of Queuing system (G/G/1, D/D/1,, M/G/1, M/M/1) characteristics, notation, Measures of performance of Queuing system, example of single channel of Queue, the Able Baker call center problem.Simulation of inventory system (News Paper seller problem), Other examples: Reliability problem, Use of random normal numbers for simulation, project simulation, Lead Time Demand, Job Shop Model.	12
3	Simulation Models using Random Numbers and Variates	Simulation Examples based on statistical distributions. Discrete distributions, Continuous distributions, Poisson process.Random- Number Generation: Properties of Random Numbers, Generation of Pseudo- Random Numbers, Techniques for Generating Random Numbers, Tests for Random Numbers. Random Variate Generation:Inverse Transformation Technique –Uniform Distribution, Exponential Distribution, Weibull Distribution. Convolution Method for Erlang Distribution, Acceptance-Rejection Technique – Poisson Distribution.	12
4	Input and Output Analysis	Input Models with Data: Data Collection, Identifying the Distribution with Data - Parameter Estimation, Goodness of Fit Tests: Chi-Square Test, Kolmogorov-Smirnov Test. Selecting Input Models without Data , Time-Series Input Models Output Analysis: Stochastic Nature of Output Data - Types of Simulation with respect to Output Analysis- Measures of Performance and their Estimation (Point Estimation, confidence Interval Estimation). Output Analysis for Terminating Simulations (Confidence Interval Estimation)Output Analysis for Steady-State Simulation.(Error estimation)	12
5	Verification and Validation	And ConstructionModel Building, Verification and Validation; Verification of Simulation Models - Calibration and Validation of Models:- Face Validity, Validation of Model Assumptions, Validating Input-Output Transformations - Input-Output Validation using Historical Input Data, Input-Output . Validation using a Turing	06

		Test. Optimization via simulation examples.							
6	Modelling and	Simulation of manufacturing systems, Simulation of computer							
	Simulation of	systems, Simulation of supermarket. Simulation of							
	Real World	Transportation model, business model, Medical models, Social							
	Problems	Science models.

- Understanding of Object Oriented Programming Language
- Knowledge of Algorithms

Course Educational Objectives (CEO): At the end of the course, the students will be able to:

CEOL402.1	Understand the concepts of output primitives of Computer Graphics.
CEOL402.2	Learn 2 D and 3 D graphics Techniques.
CEOL402.3	Study various Image Processing techniques

MCAL402.1	Implement the algorithms to draw output primitives of Computer Graphics.
MCAL402.2	Implement 2D transformations
MCAL402.3	Implement 3D transformations
MCAL402.4	Implement various image processing techniques.

Sr. no	Module	Detailed Contents	Hours
01	Introduction	Introduction to graphics coordinates system	2
		and demonstration of simple inbuilt graphic	
		functions	
02	Output primitives & its	Implementation of line generation	6
	Algorithms	A. A. DDA line	
		B. Bresenhams line	
0.2		C. application of Line drawing algos.	4
03	Output primitives & its	Implementation of circle drawing	4
	Algorithms	A. Midpoint circle	
0.4		B. application of Circle drawing algos.	
04	Output primitives & its	Implementation of ellipse drawing	4
	Algorithms	A. Midpoint Ellipse	
05	Output primitives & its	Implementation of curve drawing	2
	Algorithms	A. Bezier Curve	
06	Output primitives & its	Implementation of filling algorithms	8
	Algorithms	A. Boundary fill	-
	rigoritinis	B. Flood fill	
		C. Scan line	
		D. application of Circle drawing algos.	
07	2D Geometric	Implementation of two dimensional	6
	Transformations &	transformations	
	Clipping	A. Translation, Rotation & Scaling	
	Cubbung	B. Shear & Reflection	
08	2D Geometric	Implementation of clipping algorithms	10
	Transformations &	A. Cohen Sutherland Line clipping	
	Clipping	B. Midpoint Subdivision	
		C. Sutherland Hodgeman Polygon Clipping	
09	Basic 3D Concepts &	Implementation of 3D Transformations	2
	Fractals	(only coordinates calculation)	
10	Basic 3D Concepts &	Implementation of fractal generation	6
	Fractals	A. Koch curve/Snowflake	
		B. Sirepenski Triangle	
11	Introduction of Animation	Implementation of animation programs	4
		(using basic inbuilt Graphical functions)	
12	Image Enhancement	Implementation of Basic Intensity	6
	Techniques	Transformations	
	-	A. Image negative	
		B. Log transformation	
		C. Power law Transformation	
13	Image Enhancement	Implementation of Piecewise-Linear	8
13	8	Transformation Functions	0
	Techniques	A. Contrast Stretching	
		B. Grey level Slicing	
14	Image Enhancement	C. Bit plane slicing Implementation of histogram equalization	10
14	8		10
	Techniques	A. Image histogram & histogram	

University of Mumbai, MCA Year II and III (Rev. 2017-18)

	Equalization	
	B. Image Subtraction	
	C. Image averaging

Pre-requisites: ----

Course Educational Objectives (CEO): At the end of the course, the students will be able to

CEOL403.1	To provide essential professional skills needed to make a positive impact on work and social lives
CEOL403.2	Understand the corporate culture and adapt to various situations
CEOL403.3	Improve their etiquettes, interpersonal skills and professional image

MCAL403.1	Develop skills in communication, business correspondence, presentations, group
	discussions and interviews
MCAL403.2	Apply valuable strategies and interpersonal skills thereby making themselves more
	productive and better capable to lead others
MCAL403.3	Understand the importance of teamwork and learn to perform to the best of their
	ability, both individually and as team players

Sr. No	Module	Detailed Contents	Hrs
1	Soft Skills Introduction	Soft-Skills Introduction What are Soft Skills? Significance of Soft- Skills – Soft-Skills Vs. Hard Skills - Selling Soft- Skills – Components of Soft Skills – Identifying and Exhibiting Soft-Skills	01
2	Communicat	Concept and meaning of communication, methods of communication, verbal and non-verbal communication, barriers to communication, techniques to improve communication. Communication in a business organization: Internal (Upward, Downward, Horizontal, Grapevine). External Communication, 7 C's of communication. Active Listening, Differences between Listening and Hearing, Critical Listening, Barriers to Active Listening, Improving Listening Practical (Role plays, case studies)	02
3	Written Business Communicat ion	Written Communication: Principles of Correspondence, language and style in official letter (full block format, modified block format), Business letters (enquiry to complaints and redressal), Application letter, CV writing, , E-mail etiquette, Documentation of Meetings, Notice, Agenda, Minutes of Meetings. Practical (Practice on CV, Business Letters, Applications, Notice, Agenda, Minutes of Meetings)	04
4	Presentation Skills	 Presentation techniques, Planning the presentation, Structure of presentation, Preparation, Evidence and Research, Delivering the presentation, handling questions, Time management. Visual aids. Practical - Presentation by students in groups of maximum 3 on Organizational Behavior topics allocated by faculty. Topics have to cover – 1. Personality: Meaning, Personality Determinants, Traits, Personality types and its, impact on career growth, 2. Personality and Values, Perception and Individual Decision Making. 3. Diversity in Organizations 4. Attitude: Meaning, Components of Attitude, changing attitude and its impact on career growth 5. Motivation 6. Goal setting: SMART (Specific, Measurable, Attainable, Realistic, Timely) Goals, personal and professional goals 7. Time Management. 8. Learning in a group, Understanding Work Teams, Dynamics of Group Behavior, Techniques for effective participation 9. Leadership 10. Emotional intelligence 	
5	Effective Public Speaking	Public Speaking, Selecting the topic for public speaking, Understanding the audience, Organizing the main ideas, Language and Style choice in the speech, Delivering the speech Practical (Extempore)	03
6	Group Discussions	Group Discussion Skills, Evaluation components, Do's and Don'ts. Practical (Group Discussions)	03
7	Interview	Interview Techniques, Pre-Interview Preparation, Conduct during	03

Techniques	interview, Verbal and non-verbal communication, common mistakes.	
	Practical (Role plays, mock interviews)

Assessment:

Internal:

Internal term workwould consist of

- 1. A written examination of 20 marks
- 2. Continuous evaluation of 30 marks would be done by internal faculty on the basis of student participation in all practical activities during entire semester.

Basic knowledge of networks and communication

Course Educational Objectives (CEO): At the end of the course, the students will be able to

CEO501.1	Learn the concepts of wireless communication and mobile networks
CEO501.2	Identify different wireless technologies and its applications
CEO501.3	Acquire knowledge on generation of cellular networks and its standards used

MCA501.1	Understand the concept of cellular communications, advantages and its limitations
MCA501.2	Compare the various wireless technologies and its applications
MCA501.3	Apply the appropriate technology in the applications

Sr. No.	Module	Detailed Contents	Hrs
1	Wireless Technology Fundamentals	Introduction to Mobile and wireless communications, Overview of radio transmission frequencies, Signal Antennas, Signal Propagation, Multiplexing – SDM,FDM, TDM,CDM, Modulation – ASK,FSK,PSK, Advanced FSK, Advanced PSK, OFDM, Spread Spectrum – DSSS,FHSS, Wireless Transmission Impairments – Free Space Loss, Fading, Multipath Propagation, Atmospheric Absorption, Error Correction – Reed Solomon, BCH, Hamming code, Convolution Code (Encoding and Decoding)	08
2	Wireless Networks	Wireless network, Wireless network Architecture, Classification of wireless networks – WBAN, WPAN, WLAN, WMAN, WWAN. IEEE 802.11, IEEE 802.16, Bluetooth – Standards, Architecture and Services	06
3	Cellular wireless Networks	Principles of cellular networks – cellular network organization, operation of cellular systems, Handoff. Generation of cellular networks – 1G, 2G, 2.5G, 3G and 4G.	06
4	Mobile communication systems	GSM – Architecture, Air Interface, Multiple Access Scheme, Channel Organization, Call Setup Procedure, Protocol Signaling, Handover, Security, GPRS – Architecture, GPRS signaling, Mobility management, GPRS roaming, network, CDMA2000- Introduction, Layering Structure, Channels,Logical Channels, Forward Link and Reverse link physical channels, W-CDMA – Physical Layers, Channels, UMTS – Network Architecture, Interfaces, Network Evolution, Release 5, FDD and TDD, Time Slots, Protocol Architecture, Bearer Model Introduction to LTE	12
5	Mobile Network Layer	Mobile IP – Dynamic Host Configuration Protocol, Mobile Ad Hoc Routing Protocols– Multicast routing	06
6	Mobile Transport Layer	TCP over Wireless Networks – Indirect TCP – Snooping TCP – Mobile TCP – Fast Retransmit / Fast Recovery Transmission/Timeout Freezing-Selective Retransmission – Transaction Oriented TCP, TCP over 2.5 / 3G wireless Networks	07
7	Application Layer	WAP Model- Mobile Location based services -WAP Gateway – WAP protocols – WAP user agent profile, Caching model-wireless bearers for WAP - WML – WMLScripts – WTA.	07

Assessment:

Internal:

Assessment consists of two tests (T1 and T2) .The final marks should be the average of the two tests.

End Semester Theory Examination: Guidelines for setting up the question paper.

- Question paper will comprise of total six questions.
- Question Number One should be compulsory.
- All question carry equal marks.
- Students can attempt any three from the remaining.
- Questions will be mixed in nature (for example supposed Q.2 has part (a) from module 3 then part (b) will be from any module other than module 3).

In question paper weightage of each module will be proportional to number of respective lecture hours as mention in the syllabus.

Computer Networks, Operating Systems

Course Educational Objectives (CEO): At the end of the course, the students will be able to

CEO502.1	Introduce advance distributed concepts.
CEO502.2	Emphasize on design techniques and constraints of distributed computing
CEO502.3	Emphasize on analysis of cloud computing, its security and its storage

MCA502.1	Distinguish between distributed computing and parallel computing
MCA502.2	Understand concepts of SOA.
MCA502.3	Demonstrate different cloud technologies
MCA502.4	Designing security and storage in cloud technologies.

Sr.	Module	Detailed Contents	Hrs
No.			
1	Introduction to	Basic concepts of distributed systems, distributed computing	11
	Distributed	models, software concepts, issues in designing distributed systems,	
	Computing	client server model	
	Concepts	Inter Process Communication	
		Fundamental concepts related to inter process communication	
		including messagepassing mechanism, a case study on IPC in	
		MACH, concepts of group communication and case study of group	
		communication CBCAST in ISIS, API for Internet Protocol.	
		Remote Communication	
		Remote Procedural Call (RPC), Remote Method Invocation	
		(RMI), a case study on Sun RPC, a case study on JAVA RMI.	
2	Clock	Introduction of clock synchronization, global state mutual Exclusion	02
	synchronization	algorithms, election algorithms.	
3	Distributed	Fundamental concepts of DSM, types of DSM, various hardware	06
	Shared Memory	DSM systems, Consistency models, issues in designing and	
	_	implementing DSM systems.	
4	Distributed	Resource management, process management, fault tolerance, code	09
	System	migration, CORBA: Overview of CORBA, Communication,	
	Management	Processes, Naming, and Synchronization.	
	and Object		
	based System		
5	Introduction to	Parallel computing, scope of parallel computing, Abstract model of	08
	Parallel	serial & parallel computation, pipelining, data parallelism, control	
	Computing	parallelism, scalability, topologies in processor organization,	
	Computing	parallel computing design consideration, parallel algorithms &	
		parallel architectures, applications of parallel computing.	
6	Advances in	Service-Oriented Architecture, Elements of Service-Oriented	04
	Distributed	Architectures, RPC versus Document Orientation, Major Benefits	
	Computing	of Service- Oriented Computing, Composing Services, Goals of	
		Composition, Challenges for Composition, Spirit of the Approach.	
7	Fundamentals	Evolution of Cloud Computing ,cluster computing Grid computing,	12
	of Cloud	Grid computing versus Cloud Computing, Key Characteristics of	
	computing,	cloud computing.	
	cloud Security	Cloud models: Benefits of Cloud models, Public Cloud, Private	
	and Storage	Cloud, Hybrid Cloud, Community Cloud, Shared Private Cloud,	
	0	Dedicated Private Cloud, Dynamic Private Cloud, Savings and cost	
		impact, Web services delivered from cloud, Platform as a service,	
		Software as a service, Infrastructure as a service.	
		Cloud Security Fundamentals and Storage	
		Privacy and security in cloud, Security architecture, Data security,	
		Identity and access management, security challenges, Storage	
		basics, Storage as a service providers, aspects of data security.

Assessment:

Internal:

Assessment consists of two tests (T1 and T2) .The final marks should be the average of the two tests.

End Semester Theory Examination: Guidelines for setting up the question paper.

- Question paper will comprise of total six questions.
- Question Number One should be compulsory.
- All question carry equal marks.
- Students can attempt any three from the remaining.
- Questions will be mixed in nature (for example supposed Q.2 has part (a) from module 3 then part (b) will be from any module other than module 3).

Basic understanding of morals/ethics, social values and technical writing.

Course Educational Objectives (CEO): At the end of the course, the students will be able to

CEOILE5051.1	Understand basics of intellectual property.				
CEOILE5051.2	Relate the knowledge of Intellectual Property Laws of India as well as				
	International treaty procedures.				
CEOILE5051.3	Get acquaintance with Patent search and patent filing procedure and				
	applications.				

Course Outcomes (CO): At the end of the course, the students will be able to:

MCAILE5051.1	Understand Intellectual Property assets.
MCAILE5051.2	Assist individuals and organizations in capacity building.
MCAILE5051.3	Distinguish information across organizations.
MCAILE5051.4	Work for development, promotion, protection, compliance, and enforcement
	of Intellectual Property and Patenting.

Sr. No.	Module	Detailed Contents	Hrs
1	Introduction to IPR	 Introduction: Concepts and meaning of Intellectual property, IPR, Different category of IPR instruments - Patents, Trademarks, Copyrights, Industrial Designs, Semiconductor Integrated Circuits Layout-Design, Plant variety protection, Geographical indications, Transfer of technology etc. Indian Scenario of IPR: Introduction, History of IPR in India, Overview of IP laws in India, Indian IPR, Administrative Machinery, Major international treaties signed by India. 	10
2	Ownership and Enforcement of IPR	 Enforcement of Intellectual Property Rights: Introduction, Extent of problem, Factors that create and sustain counterfeiting/piracy, International Organizations, Agencies, and treaties active in IPR enforcement (e.g. INTA,WIPO,WTO, Madrid Protocol, Paris convention, NAFTA,TRIPS). Ownership of intellectual property rights: Ownership, Changes of Ownership 	08
3	Emerging Issues and Management of IPR	Emerging Issues of IPR: IPRrelationship with software and technology, Challenges for IP in digital economy, e-commerce, human genome, biodiversity and traditional knowledge etc. Management of IPR: Introduction, Overall management of IPRs ,Management of non- registrable rights	06
4	Copyrights	Introduction and law, Types of copyright, Ownership and duration of copyright, Marking, Moral rights, Other relevant law, Copyright use and misuse, Exceptions to copyright infringement – fair dealing, Taking action against infringers, Criminal liability, Copyright licenses, Copyright internationally – general and non-technical works, Technical copyright, Copyleft, Managing copyright	08
5	Trademarks	Introduction to trade marks, Registrable trademarks, Unregistered trademarks, 'get-up' and 'passing-off', Criminal provisions and counterfeiting, Avoid being sued, Trade marks in other countries, Domain names	07
6	Patents	Introduction, Process to get a patent, Filing a patent application, Patent applications in India and other countries, Search Patents on Indian Patent Office Website	08
7	Confidential information	Introduction, Confidential disclosure, Employees, Confidential computer programs, Unwanted confidences, Managing confidential information, Know-how and show-how, Legal remedies, Confidentiality in other countries, Summary of confidentiality	05

Basic knowledge of Hardware, software and networking

Course Educational Objectives (CEO): At the end of the course, the students will be able to

CEOILE5054.1	Understand what Green IT is and how we can meet standards set for Green
	Computing
CEOILE5054.2	Comprehend Green IT from the perspective of hardware, software, storage,
	and networkingat the enterprise level.
CEOILE5054.3	Strategize Green Initiatives and look at the future of Green IT

Course Outcomes (CO): At the end of the course, the students will be able to

MCAILE5054.1	Create awareness among stakeholders and promote green initiatives in their
	environments leading to a green movement.
MCAILE5054.2	Adopt special skills such as knowledge about energy efficiency, ethical IT
	assets disposal, carbon footprint estimation.
MCAILE5054.3	Create eco-friendly environment.

Assessment:

Internal:

Assessment consists of two tests (T1 and T2) .The final marks should be the average of the two tests.

University of Mumbai, MCA Year II and III (Rev. 2017-18)

End Semester Theory Examination: Guidelines for setting up the question paper.

- Question paper will comprise of total six questions.
- Question Number One should be compulsory.
- All question carry equal marks.
- Students can attempt any three from the remaining.
- Questions will be mixed in nature (for example supposed Q.2 has part (a) from module 3 then part (b) will be from any module other than module 3).

Basic understanding on Java programming and XML

Course Educational Objectives (CEO): At the end of the course, the students will be able to

CEOL501.1	Understand the entire Android Apps Development Cycle
CEOL501.2	Apply the advanced android development techniques
CEOL501.3	Conceptualize the design of user applications using User Experience Design.

Course Outcomes (CO): At the end of the course, the students will be able to

MCAL501.1	Demonstrate Android activities life cycle
MCAL501.2	Apply proficiency in coding on a mobile programming platform.
MCAL501.3	Design and develop innovative android applications
MCAL501.4	Create real life application with end-to-end understanding of User experience
	practices.

Sr. No.	Module	Detailed Contents	Hrs							
1	Introduction to Android	The android platform, the layers of android, Four kinds of android components, understanding the androidManifest.xml file, creating an android application Introduction to android SDK, Exploring the development environment	04							
2	User interfaces	Creating the activity, working with views, using resources Working with intents and services, Different types of layouts, components.	06							
3	Storing and Retrieving data	Using the file system, working with shared preferences, persisting data to a database, Working with content providers	10							
4	Graphics and animation, Multimedia	Drawing graphics in android, creating animations with androids graphics API,Playing audio & video, Capturing media	06							
5	Location, Sensors	Using Location Manager and Location Provider, working with maps, Working with GPS, Bluetooth and WiFi, Integrating google maps, services for push notificationGoogleads.	04							
6	REST API integration	UsingAsyncTask to perform network operations, introduction to 0 HtttpUrlConnection and JSON, performing network operations asynchronously, working with OkHttp, Retrofit and Volley								
7	Database connectivity and distributing androidapplicat ion	SQLite Programming, Android database connectivity using SQLite , distribution options, packaging and testing the application, distributing applications on google play store								
8	Open source UX tools	Study of open source UX tools	02							
9	Creating new prototype	selecting device, defining prototype settings	02							
10	Identify and describe the objectives for UED experiment	 a. Perform user research b. User requirement collection c. User Requirement Analysis d. Create User personas, user scenarios , customer journey maps 	08							
11	UX Design – for Web and Mobile application	 a. Conceptual Design- Site Maps b. Create Wireframe c. Create Screens, Widgets, Outlines d. Setting properties e. Ordering Screens, Screen Transition f. Adding Actions & Triggers, Header & footer 	08							
12	UX Evaluation	a. Set UX Goalsb. Perform UX Evaluation and Reportingc. Usability Test	02							
13	Mini project	Developing mobile applications based on UED principles.	10

Basic overview of Advanced Distributed Computing and Cloud Computing.

Course Educational Objectives (CEO): At the end of the course student will be able to

CEOL502.1	To Understand Concepts of distributed and cloud computing
CEOL502.2	To learn open source technology.
CEOL502.3	To teach various protection and security mechanisms for data using cloud concepts

Course Outcomes (CO): At the end of the course student will be able to

MCAL502.1	L502.1 Design and Develop the solution to a problem using java concepts					
MCAL502.2	Demonstrate use of java Concepts					
MCAL502.3	Explore various advanced distributed concepts.					

Sr. No.	Session	Detailed Contents	Hrs
1	Remote Process Communicati on	Develop a program for multi-client chat server. Concept: Develop a multi-client chat server application where multiple clients chat with each other concurrently. The messages sent by different clients are first communicated to the server and then the server, on behalf of the source client, communicates the messages to the appropriate destination client.	08
2	Remote Procedure call	ImplementationofRemoteProcedureCallConcept: This application will demonstrate the remote procedure communication.a) Implement a Server calculator containing ADD(),MUL(),SUB()etc.b) Implement a Date Time Server containing date() and time()	08
3	Remote Method Invocation	Remote Method Invocation supporting the distributed computing in java. Concept: Create a client and server application where the client invokes methods via an interface. These methods are implemented on the server side. Create the necessary STUBS and SKELETONS. a) Design a Graphical User Interface (GUI) based calculator (scientific or standard). Operations should be performed using both mouse and keyboard. b) Retrieve time and date function from server to client. This program should display server date and time. c) Equation solver. The client should provide an equation to the server through an interface. The server will solve the expression given by the client. (a-b)2 = a2 - 2ab + b2; If $a = 5$ and $b = 2$ then return value $= 52 - 2.5.2 + 22 = 9$.	14
4	Memory Management	In a = 5 and b = 2 then return value = 52 = 2.5.2 + 22 = 9. Implementation of Shared Memory a) Write a program to increment counter in Shared memory	04
5	Remote Object Communicati on	 a) write a program to interement counter in bilated memory Remote objects for database access. Concept:Pass remote objects from the server to the client. The client will receive the stub object (through remote interfaces) and saves it in an object variable with the same type as the remote interface. Then the client can access the actual object on the server through the variable. Make use of JDBC and RMI for accessing multiple data access objects. a) Retrieve the students information from the college database. b) Retrieve the list of books available in the library. c) Retrieve the MTNL billing information from the MTNL database 	10
6	Enterprise Java Beans	 Sample program for basic arithmetic operations implemented in session bean. Sample program on message bean demonstration. 	10

10	Case studies	Google, Microsoft, AWS.	06
9	Grid Services	Study of Grid services using various tools.(any two)	02
	Computing	Machine Technology, Cloud data center	
8	Cloud	Study of cloud technologies : Virtualization Technologies, Virtual	08
		Note: Use any one technique	
		c) Token Ring	
		b) Distributed	
		a) Centralized	
		the process communication.	
	Exclusion	Concept : This technique solves the mutual exclusion existing in	
7	Mutual	Implementation of mutual exclusion using any of the technique.	08
		4) Demonstrate a program on Statefull and Stateless Bean.	
		3)Sample program to Book Information using Entity bean	

Based on the recommended syllabus student should provide one Presentation/Case study.

Course Educational Objectives (CEO): At the end of the course, the students will be able to

CEOPR501.1	Conceptualize knowledge with emphasis on team work, effective						
	communication, critical thinking and problem solving skills.						
CEOPR501.2	Adapt to a rapidly changing environment by having learned and applied new						
	skills and new technologies.						
CEOPR501.3	Study designing small projects in a multidisciplinary environment.						

Course Outcomes (CO): At the end of the course, the students will be able to:

MCAPR501.1	Design, implement and evaluate a project.
MCAPR501.2	Gain project management skills.
MCAPR501.3	Work effectively and ethically in a team towards project development
MCAPR501.4	Demonstrate the ability to produce a technical document.

Sample Guidelines for Preparing and Documenting the Project Report

Sr. No.	Module	Detailed Contents				
1	Introduction	 Introduction of the project Problem definition Objective of Project scope of Project 				
2	Literature Survey	 Existing System Proposed System Knowledge Integration Use Cases 				
3	Analysis	 Exploring Possibilities Feasibility Analysis Cost Benefit Analysis Flowchart/ DFD/ER/UML diagram(any other project diagram 				
4	Methodology	 Criteria & constraints (Process models) Tools used Procedure 				
5	Design And Developing A Prototype	 Module design and organization Data Design user interface design Model or Prototype 				
6	Project Execution Plan	Plan using Project Management Tools				
7	Testing & Validation	Test cases and Report (based on manual & automation testing)				
8	User Manual	 Explanation of Key functions Method of Implementation Forms Output Screens 				
9	Conclusion	Project Conclusion & Future enhancement				

• Rubrics guidelines to be followed during project evaluation.

• **REFERENCES** should be written as

1. Author Name, Title of Paper/ Book, Publisher's Name, Year of publication 2. Full URL Address

Parameters for Evaluation:

- The mini project is evaluated for 50 marks.
- Term work should be based on 2 presentations of ten marks each and five marks for documentation.
- Oral (25 marks) should be based on final demonstration and presentation.

** Mini Project will be performed by students during summer vacation of Even Semester of second year (SEM IV). Mini project will be evaluated in SEM V. Evaluation of the mini project will be internal 25 marks as TW and 25 marks as oral examination conducted by External Examiner.

Course Educational Objectives (CEO): At the end of the course, the students will be able to

CEOPR601.1	Achieve hands on experience in an organization					
CEOPR601.2	Relate classroom and textbook learning to the real world.					
CEOPR601.3	Learn the professional skills and interpersonal relationship in professional environment					

Course Outcomes (CO): At the end of the course, the students will be able to

MCAPR601.1	Attain an exposure to real life organizational and environmental situations
MCAPR601.2	Attain technical skills as per the requirements of the domain
MCAPR601.3	Adapt professional and interpersonal ethics.
MCAPR601.4	Articulate SDLC phases in developing software project and in writing the
	project document.

The guidelines regarding preparation of Internship-Project report for MCA SEM-VI

- To take hands-on experience of the real world, every candidate is required to undertake a project of 6 months duration in an organization of repute and must submit their project documentation.
- Each student should submit different documentation in a specified format illustrating his/her role/contribution in the project and write the documentation from his/her perspective.
- One copy should be submitted for University records which will be retained by the college and another one is student copy.
- Each student must submit one CD having the documentation part in PDF file format only.
- Hard copy of the project report must be submitted before a week of finalpresentation.
- Students have to present their project individually.

University of Mumbai, MCA Year II and III (Rev. 2017-18)

- Feedback form from the Industry should be submitted separately in sealed envelope to the internal guide.
- Students must ensure the originality of the work with ethics.

Assessment:

Internal:

Assessment consists of two presentations of 25 marks each. The final marks should be the sum of the two presentations.

Rubrics has to be followed during project evaluation.

Subject Code			Subject Name							Cr	redits			
MCA602			Research Paper							01				
								1						
Subject	Subject Name			Teaching Scheme Cre				Crec	dits Assigned

							5)				-	-	50

Course Educational Objectives (CEO): At the end of the course, the students will be able to

CEO602.1	Understand analytic approach towards choosing a research project and acquiring research skills
CEO602.2	Access relevant data and present new ideas related to area of research.
CEO602.3	Adhere to ethical standard of research.

Course Outcomes(CO): At the end of the course, the students will be able to

MCA602.1	Write a research paper.								
MCA602.2	Present data coherently and effectively, outcome and counter-hypothesis								
MCA603.3	Attain experience in preparation of research materials for publication or								
	presentation.								

Seminar (50 Marks)-

- 1. Students must have in depth study in a specialized area by doing a survey of published technical literature and write a research paper in IEEE format (6-9 pages).
- 2. The research topic must be approved from the Institute. The institute should set up a committee to scrutinize the topics and finalize the same
- 3. The research paper may be written in a group of maximum 2 students.
- 4. The research paper must be published in national/ international conference or national/ international journal of repute.
- 5. The bifurcation of marks for the seminar will be as follows:
 - a. Original Contribution 10 marks
 - b. Paper Quality Published (5 marks)
 - Contents (5 marks)
 - c. Documentation (Language format) 10 Marks
 - d. Oral Presentation 10 Marks
 - e. Conclusion (Future Scope/ Recommendations/ Suggestions/ Findings)-10 marks
